

Training Courses

Complete Racking Safety Management

Industry-leading courses for effective racking safety management.

Location

On Site

The vast majority of these courses are run on the racking end users site. This both reduces cost, and downtime while also enabling us to familiarise the delegates with the racking on site.

We allow up to 6 delegates per course.

Midlands Training Centre

For smaller sites where there may not be 6 delegates, we run a monthly racking awareness course at our midlands based training centre.

Places can be booked individually online.

> Racking Awareness

Course Topics

- > Outline of racking management
- > Racking components terminology
- > Racking components in detail
- > Current relevant guidelines and legislation
- > Risk categories
- > Defect tolerances and classifications
- > Recording defects effectively
- > Safety offloads
- > Understanding safe working load notices
- > Pallet clearances
- > Racking roles and responsibilities
- > Method of inspection

Suitable For

Warehouse Operatives
Internal Racking Inspectors
Person Responsible for Racking Safety (PRRS)
Operations / Health and Safety Management

➤ Racking Awareness

Course Objectives

- Enable delegates to accurately identify racking components and defects
- Help delegates to understand relevant legislation and its importance
- Teach delegates what action is needed after a component is identified as defective
- Show delegates how to read safe working load notices and understand their importance
- Making the warehouse a safer place to work

“appoint one or more competent persons to assist him in undertaking the measures he needs to take to comply with the requirements and prohibitions imposed upon him by or under the relevant statutory provisions”

The Management of Health and Safety at Work Regulations 1999" Section 7, 7.1

> Racking Awareness

Course Synopsis

This comprehensive course equips participants with the knowledge and skills to improve racking safety on site. Throughout the training, delegates will become adept at identifying racking components, recognising defects, and effectively applying risk categorisation to defects.

We cover the crucial processes of pallet offloads and isolation to ensure racking safety. Delegates will also gain insights into the significance of Safe Working Load (SWL) Notices and learn how to conduct regular internal racking inspections in full compliance with HSG76 guidelines.

“The PRRS should ensure that inspections are made at weekly or other regular intervals based on risk assessment. A formal written record should be maintained.”

HSE HSG76: 645, Visual Inspections

> Racking Awareness

Specific Course

We tailor this course to the racking end user and as such there are different courses available, please see below.

Tailored to racking end users with Adjustable Pallet Racking.

Tailored to racking end users with Cantilever Racking.

Tailored to racking end users with both Adjustable Pallet Racking and Cantilever Racking.

Racking Maintenance

Course Topics

- Outline of racking maintenance
- Current relevant guidelines and legislation
- Maintenance roles and responsibilities
- Equipment and component requirements
- Maintenance offloads
- Safety exclusion zones
- Pre-maintenance tasks
- Task specific risk assessments
- Task specific method statements

Suitable For

Maintenance Teams
Engineers
Person Responsible for Racking Safety (PRRS)
Operations / Health and Safety Management

Racking Maintenance

Course Objectives

Provide each delegate with safe working methods and risk assessments for racking maintenance tasks

Enable the delegates to complete basic pallet racking maintenance in a safe and competent manner

Enable the warehouse to become a safer place of work with less location down-time

Delegate Requirements

Working at Height Trained

MEWP License

Engineering Background

Successful Completion of Racking Awareness Training

Racking Maintenance

Course Synopsis

This pioneering course enables businesses to take control of their racking remedial works on site and make long-term cost savings. Throughout the training, delegates will be familiarised with their on-site racking system and complete a series of remedial tasks.

“A competent person is someone who has sufficient training and experience or knowledge and other qualities”

The Management of Health and Safety at Work Regulations 1999

We start by covering the theory side including exclusion zones, maintenance roles, safe methods of work and risk assessments before moving on to the more practical elements. Delegates gain the skills and confidence to ensure the racking system remains in working condition.

Racking Maintenance

Specific Course

We tailor this course to the racking end user and as such there are different courses available, please see adjacent.

Please note that there is no combined course due to the unique elements of each system and the time constraints. Sites with both Adjustable Pallet Racking and Cantilever Racking must complete both courses.

Tailored to racking end users with Adjustable Pallet Racking.

Tailored to racking end users with Cantilever Racking.
